

three operations on the segment, one division lemma: the ring does not change

(a) adjoin the eigenvalue 1

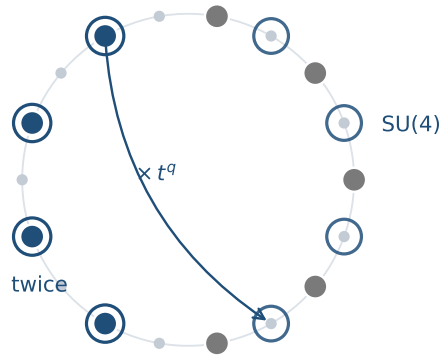

$SU(9) = Sp(8)$
the factor is $T - 1$

(b) take the complement: level-rank

$SU(4) = SU(5)$ at $q = 9$
the product is $T^q + 1$

(c) one full turn

$SU(13) = SU(4)$ at $q = 9$
the factor is $T^q - 1$
